

INDEXING CHIN BAR

The Sorinex Indexing Chin Bar replaces static overhead pull-up options with variable positioning for an integrated overhead system for safer and more efficient movement. Attach anywhere inside of racks for increased space efficiency thanks to our industry-first 4-Way Hole design. Indexing handles rotate and lock in at 45-degree increments creating 8 different positions per handle. Handles can be moved in closer or further away from each other for wide/narrow grip variations as well. The Sorinex Indexing Chin Bar supports the athlete inside of the Base Camp, XL Series, Apex, and Dark Horse Racks. A chin up bar inside the rack helps control risk and increases carrying capacity within your training environment by allowing more athletes than ever to train safely at one station. The Sorinex Indexing Chin Bar comes standard on all Base Camp Series with Uber Package racks.

SPECIFICATIONS

DEPTH	10"
WIDTH	41"
GRIP DIAMETER	1.25"
